

# KBPublisher v8.0.2 release notes

---

KBPublisher release 8.0.2 fixed several issues found in [release 8.0.1](#)

- Fixed issue with / not escaping correctly when sphinx search is enabled.
- Fixed issue with roles not being defined correctly in sphinx search.
- Fixed issue with sphinx not searching correctly in custom fields.
- Fixed corrupted AuthSocialGoogle.php file.
- Fixed issue with article/file subscription email sending time.
- Fixed issue with incorrect redirect after login when MFA is enabled.

## Upgrading KBPublisher

This package is available as both a standard upgrade and as a Modified Files package.

All downloads are available in your [client area](#).

- To upgrade from **v8.0.1 to 8.0.2**, you can use the "Modified Files package." Please read about how to [replace modified files only](#).
- To upgrade from an earlier version, please read [Upgrading KBPublisher](#).
